

Patent Claims

1. A fixing for an oil cooler (18) in a vehicle, in which the oil cooler (18) is fixed in an oil cooler receiving element (10), characterized in that there is a latching connection between oil cooler receiving element (10) and oil cooler (18).
5
2. The fixing as claimed in claim 1, characterized in that the latching connection comprises a latching means (16) which is on the side of the oil cooler receiving element and engages in a latching receiving element (17) on the side of the oil cooler.
10
3. The fixing as claimed in claim 2, characterized in that the latching means (16) and the latching receiving element (17) form a clip connection, the clip connection being releasable in particular in a non-destructive manner.
15
4. The fixing as claimed in one of the preceding claims, characterized in that the latching connection is kept pretensioned in a desired position by an energy store.
20
5. The fixing as claimed in claim 4, characterized in that the spring store is formed from a material tongue (19) which is formed on the latching receiving element (11).
25
6. The fixing as claimed in either of claims 4 and 5, characterized in that the spring store is divided in a dovetailed manner for additional alignment in a further direction.
30
7. The fixing as claimed in one of claims, characterized in that the oil cooler receiving
35

element (10) is of U-shaped design, with a respective latching connection being formed on both limbs (14) of the U-shape.

5 8. The fixing as claimed in claim 7, characterized in that the introduction of the oil cooler (18) into the oil cooler receiving element (10) results in the limbs (14) of the U-shape spreading out, which is at least reduced with production of the
10 latching connection.

9. The fixing as claimed in claim 7 or 8, characterized in that, in the installation position of the oil cooler receiving element (10), the limbs (14) are spaced apart vertically from one another and are preferably aligned in the longitudinal direction of the vehicle.
15

10. The fixing as claimed in one of the preceding
20 claims, characterized in that the oil cooler receiving element (10) is fixed on the vehicle side, with the fixings (13) preferably being adjustable in position.

25 11. The fixing as claimed in one of the preceding claims, characterized in that the oil cooler receiving element is made of plastic.
